

The SMARTE Playground Surface

Have you ever wanted a playground surface that can do the following?

- Be installed with local labour under expert supervision
- Meets the requirements of the CSA Z614 and ASTM F1292 at 4M (13')
- Meets the requirements of the ADA and anticipated the rotational penetrometer test for accessibility
- Long-term compliance with Standards, providing lower cost per square foot per years of service than most poured in place
- Water Permeable and easy to maintain
- Vandalism damage easy to repair with locally trained staff
- Is easy on the capital budget

The SMARTE system is unique for the above features and provides exception properties as a playground surface. In addition the ease of installation and maintenance will have you converting more of your playground surfaces to SMARTE.

As if all of the above features weren't enough, the SMARTE system recycles as many as 16 tires per square meter (1.5 tires/ft²) of installed surface. Not just a great surface, but an environmentally friendly surface.
